Throughout this project, I have created a scientific calculator and learned how to access my calculator link through my portfolio. Some of the challenges I faced were copying and pasting my Assignment 3 into Assignment 4 and making the link to my calculator work. As for copying and pasting my Assignment 3 to Assignment 4, I needed to do this several times. I kept getting the error that I can't move my images and my audio. The way that I solved my problem was by dragging my images and the audio again from my desktop. As for linking my calculator work, I kept getting the error 404 not found. I don't know what was going on, but somehow I fixed it. I didn't change anything, I did the same thing over and over, and eventually it worked.
