Analysis

This assignment has challenged me a lot. Multiple steps were needed to create 4 separate files for the code. First, the code by hand was for me to do my work and show what I can do. The 2 AI files were to give me ideas and to compare the difference between my code and the AI's code. I think that writing my code took the longest. I have to take my time to look carefully and fix the errors from top to bottom if there are any.

Preferred Version

I prefer both AI codes because these codes give me ideas of what I can write when I code in the future. I can compare these codes to my handwritten code easily.
